

WATER RESTRICTIONS

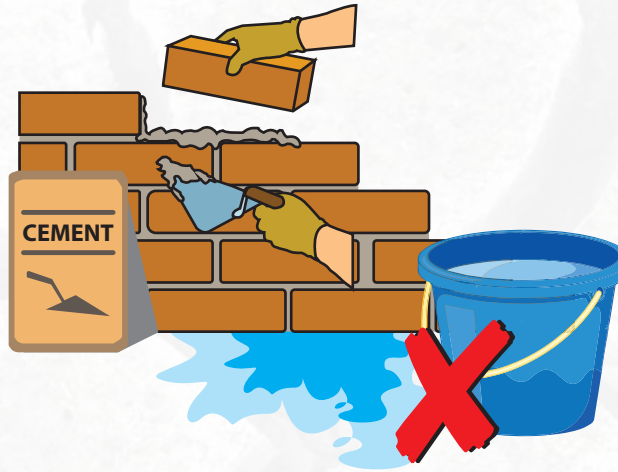

As the climatic changes continue and cause less rainfall, Water Utilities Corporation (WUC) appeals to all water users to adhere to restrictions to save the little water remaining in water sources. Violation of water restrictions constitutes an offence and is punishable by law.

Watering of all gardens, parks and sports fields using potable water is prohibited

Use of potable water for construction purposes is prohibited.

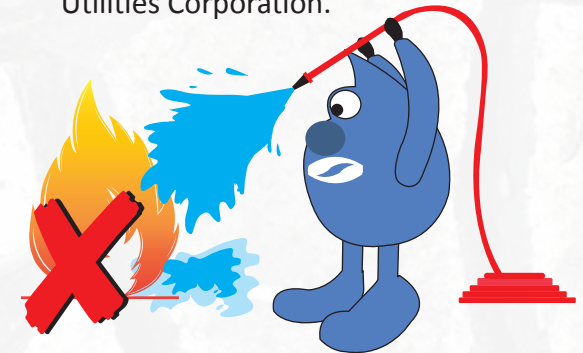

Use of hose pipes to wash cars is prohibited.

Automatic urinals are prohibited and should be terminated or retro-fitted with immediate effect.

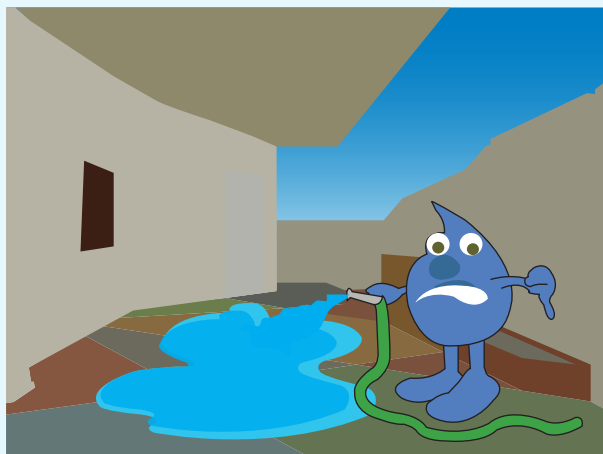

Fire drills shall only be done with the express written permission from Water Utilities Corporation.

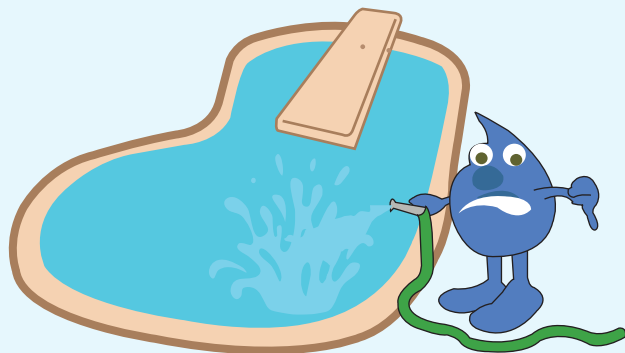

Spraying and washing of pavements, courtyards and factory floors with potable water is prohibited.

The filling of all swimming pools with potable water is prohibited.

High water users such as hair salons, laundromats are urged to adopt water efficient methods for their operations.

All defective plumbing and pipe fittings which result in water wastage must be repaired within 24 hours of notice.

Water Utilities Corporation (WUC) remains committed to ensuring availability of water for all and is currently embarking on several projects to improve water supply. Due to water supply challenges in the country, WUC introduced water restrictions to assist in its water conservation drive. The Corporation offers customers alternative sources of water for their non-potable use. This includes grey water from its wastewater treatment plants as well as selected boreholes around the country.

We appeal to all water users to adhere to the water restrictions so that the Corporation can ensure equitable water supply for all.
